Synthetic-biometric innovation creates Cyber biometrics. Just what we might need to keep airport and equipment safe and also maintaining our personal security.

Machine SAFETY   Digital TRUST   Personal SECURITY

This technology can be used all over the globe to stop fake robots/AI-machines as vel as unauthorized mobiles, PCs, and hackers to get digital access to airports, equipment and cloud services.

GS Id-Keys creates GS at Airports
Golden Security identification keys for Great Speed at Airports

  GS-ID-key

personal + synthetic = cyber
GS Id-keys, fast-lane keys

- give much higher transfer rate of passengers at "GS-airports" if

    - travelers with GS Id-keys can use a fast-lane direct through at "GS-airports"

    - they can send their luggage direct through scanning for delivery to the right airplane.

    - GS Id-keys give us warning and instruction if scanning unveil problem with our luggage.

- give much higher security and speed when only GS Id-key authorized travelers and employees can walk right through at "GS-airports"

- give fast and easy identification for entrance and "availability-control" of all the airport personnel at all the times.

- give you access to "personal parking" or "valet parking" at airports if only you can start and drive your car at return, and valet persons return the car with car-key in signal safe GS coded safe pocket.

Synthetic biometrics identification of luggage-tags and airport robots.

- Luggage-tags and GS car-pockets

    - can only be open and unlock by the right traveler using his own GS Id-key.

    - can give high security and high speed of parking and luggage transportation to right airplane for travelers with registered GS Id-keys.

- Airport-robots

    - startup and work-instruction can only be organized by authorized GS Id-key registered airport employees.

Airport GS-office and GS-travel-agents.

- At most airport-entrance you should be able to buy your "Global-GS-Id-keys" engraved with your name as shown on your passport and you should be able to buy corresponding luggage-tags coded to fit your GS Id-key,

  - only if you have a valid passport or an accepted national-ID-card.

- GS Id-keys and luggage-tags can also be bought at registered travel-agents and it might also be available at passport service at police stations.

- You can also book your Id-keys and the tags to all your travel, single or world vide traveling plans by visit both GS-Office or GS-agents-office or on-line.

-

personal   +   Synthetic = GS-ID-key

Golden Secure ID-key must be produced with "synthetic biometrics" to create the person-secure password of the future for everything and everyone. It is like creating an ID-Aladdin person as you find in the magic lamp. A unique Aladdin in each Id-key are one of the important parts of creating tamper, hacker, skimmer and theft secure personal wireless password keys. It is also an important part of creating our double unique Cyber-biometric wireless Id-signals to be used as your digital passports/national Id-cards at airports, as well as to open our doors, start our cars, open mobiles / PCs / PADs, make payments in store, secure our online banking etc. GS Id-keys differ from all other wireless-IDs by using both your own personal biometrics and the unique synthetic biometrics of your GS Id-key, at the moment, creating your unique Cyber biometric identifications as only you and nobody else can do by attend or substitute you at your identification moments .
